EDUCATION

Purdue University, 2022

Computer Engineering, *Bachelor of Science*
Organizational Leadership, *Minor*

EXPERIENCE

Control Systems Simulation Engineer

Rolls-Royce

July 2023 - Present

- Contributed to the development of real-time engine simulations and commissioned three rigs for hardware-in-the-loop (HIL) testing, gaining extensive hands-on experience in system validation using test equipment and interfacing with a vendor.
- Implemented and debugged numerous features on a software-emulated electronic engine controller for software-in-the-loop (SIL) testing, while adhering to relevant Interface Control Documents (ICDs), system-level documentation, and flight software written in Ada.
- Collaborated with cross-functional teams including hardware engineers, software developers, and verification specialists to integrate engine control systems into realistic simulation environments.
- Supported troubleshooting and optimization of engine simulations to improve system integration and performance.
- Enhanced the workflow of a continuous integration environment using software solutions within best practices.
- Created and maintained detailed documentation on Confluence, organizing technical content and project updates to ensure easy access and collaboration across teams.
- Facilitated meetings with leadership to assign tasks and discuss actions based on department-wide lessons learned.
- Led daily stand-ups, team retrospectives, and sprint ceremonies as Scrum Master.
- Leveraged knowledge in Red Hat Linux, C, C++, Fortran, Ada, Python, Git, Agile, circuit and schematic analysis, soldering, serial communication

Software Engineer, Intern

LeveragePoint Innovations

May 2022 - August 2022

- Developed an error handling notification service for a large-scale application and utilized Node.js to integrate with real-time notifications via Google Chat in addition to AWS CloudWatch logging.
- Designed and built serverless applications using the Serverless Framework, including deployment, monitoring, and scaling of various cloud services such as AWS Lambda, API Gateway, and DynamoDB.
- Built a Vue.js application and integrated it with AWS Cognito by implementing MFA and custom authentication flows utilizing AWS SDKs for creating and managing user and identity pools.
- Created a client-side application of a real-time activity logger using Vue.js which integrated with Node.js microservices.
- Leveraged knowledge in Git, Gitflow, AWS, Serverless Framework, JavaScript, JSON, Node.js, Vue.js, Pivotal, Agile

SWE Tools Teaching Assistant

Purdue University

August 2021 - May 2022

- Led lab sessions and offered one-on-one support to students and provided feedback to improve their skills.
- Collaborated with the professor and TAs to ensure course material was up-to-date and relevant to industry standards.
- Developed instructional materials and troubleshooting guides to help students understand complex software engineering tools and workflows more effectively.
- Leveraged knowledge in Git, SVN, Bash, Python, HTML, CSS, JavaScript, Node.js, Flask, SQLite3, JIRA

SKILLS

Software: AWS (CloudWatch, Lambda, API Gateway, DynamoDB, Cognito, S3, EventBridge), Python, C, C++, C#, Java, JavaScript, SQL, SQLite3, HTML, CSS, Assembly Language, Flask, Node.js, Vue.js, JIRA, Confluence, Git

Hardware: Digital and Analog Circuit Analysis, Embedded Systems, Prototyping, Soldering, Schematic Analysis, Serial Communication, Validation using Test Equipment (Oscilloscope, Multimeter, Waveform Generator, Logic Analyzer)

INTERESTS

hiking, skiing, reading fantasy books, scouting new coffee shops, making Macedonian dishes, hosting family & friends
